PROVISIONAL ANSWER KEY

Inspector of Motor Vehicles, Class II, Advt No. 102/2016-17(ATX-MECH)

Preliminary Test on 26-03-2017

Subeject Que : 001-200 Publish Date : 31-03-2017

Last Date to send suggestion(s):07-04-2017

Note: Candidate must ensure the compliance to send all suggestion in the given format with reference to this paper with provisional answer key only.

001.	A butt riveted joint with double s	strap is always in	shear.
	(A) single	(B) double	
	(C) Both A & B	(D) None of these	
002.	A uniformly distributed load is or	ne which	
	(A) acts at a point on a beam		
	(B) spreads non-uniformly over the	ne whole length of a beam	
	(C) spreads uniformly over the w	hole length of a beam	
	(D) varies uniformly over the who	ole length of a beam	
003.	The shape of the bending momen	t curve (diagram) over the lea	ngth of
	a beam, having linearly varying d	listributed load, is always	
	(A) Cubic	(B) Linear	
	(C) Parabolic	(D) Circular	
004.	According to theory of pure bendi	ng, the normal stress varies	
	across the cross section of a bear	n.	
	(A) linearly	(B) cubic	
	(C) parabolic	(D) none of these	
005.	For a cantilever beam with a unif	formly distributed load acting of	over its
	whole length, the bending momen	t is	
	(A) zero at its fixed end	(B) maximum at its centre.	
	(C) maximum at its free end	(D) zero at its free end	
006.	The angle between plane of maxi	mum shear and Principal plan	e is
	(A) 30°	(B) 45°	
	(C) 60°	(D) 75°	
007.	Modulus of rigidity is defined as	the ratio of	
	(A) longitudinal stress and longitudinal	dinal strain	
	(B) volumetric stress and volumet	ric strain	
	(C) lateral stress and lateral strain	l	
	(D) shear stress and shear strain		

008.	If the radius of wire stretched modulus will be	by a load is doubled, then its Young's
	(A) doubled	(B) halved
	(C) become one-fourth	(D) remain unaffected
009.	The impact strength of a materi	ial is an index of its
	(A) toughness	(B) tensile strength
	(C) hardness	(D) fatigue strength
010.	If a material expands freely due	e to heating it will develop
	(A) thermal stresses	(B) tensile stress
	(C) compressive stress	(D) no stress
011.	is the distance between	en the centers of rivets in adjacent rows
	of zigzag riveted joint.	
	(A) Pitch	(B) Back pitch
	(C) Diagonal pitch	(D) Margin or marginal pitch
012.	is the distance betw	een the centre of the rivet hole to the
	nearest edge of the plate.	
	(A) Pitch	(B) Back pitch
	(C) Diagonal pitch	(D) Margin or marginal pitch
013.	are used mainly for	r structural work and machine riveting.
	(A) Snap head rivets	(B) Countersunk head rivets
	(C) Pan head rivets	(D) Pop rivets
014.	are employed for	ship building where flush surfaces are
	necessary.	
	(A) Snap head rivets	(B) Countersunk head rivets
	(C) Pan head rivets	(D) Pop rivets

015.	5. A bar of cross-sectional area A is subjected to a tensile force normal stress will be maximum on the plane which is i to the cross-section of the bar.		
	(A) 0°	(B) 45°	
	(C) 5°	(D) 25°	
016.	Poisson's ratio is defined as the r	atio of	
	(A) longitudinal stress and longitudinal strain		
	(B) longitudinal strain and lateral	strain	
	(C) lateral strain and longitudinal	strain	
	(D) lateral stress and lateral strain	l	
017.	Maximum principal stress theory	was postulated by	
	(A) St. Venant	(B) Rankine	
	(C) Mohe	(D) Tresca	
018.	A cantilever is a beam whose		
	(A) Both ends are fixed		
	(B) Both ends are free		
	(C) One end is fixed and other free		
	(D) None of these		
019.	Stress in the beam and section m	odulus	
	(A) have curvilinear relation	(B) are directly proportional	
	(C) are inversely proportional	(D) None these	
020.	During tensile test, what does per	centage elongation indicate?	
	(A) Malleability	(B) Creep	
	(C) Ductility	(D) Fatigue strength	
021.	For constant velocity ratio positi	ve drive with large center distance	
	between driver and driven shaft -		
	(A) Chain drive is used	(B) V-belt drive is used	
	(C) Flat belt drive is used	(D) None of these	

022.	The power transmitted by open b	elt-drive is designed on the basis of	
	(A) Average angle of contact of t	he two pulleys	
	(B) Angle of contact of the large	r pulley	
	(C) Angle of contact of the small	ler pulley	
	(D) Angle of contact of the drive	r pulley whether smaller or larger	
023.	Which of the following is a scale	er?	
	(A) Time	(B) Force	
	(C) Torque	(D) Linear momentum	
024.	Stress is a quantity.		
	(A) vector	(B) scaler	
	(C) tensor	(D) none of these	
025.	A uniformly accelerating body exp	periences force	
	(A) In opposite direction		
	(B) In the same direction of moti	ion	
	(C) Perpendicular to the direction	of motion	
	(D) None of these		
026.	Newton's first law of motion prov	vides the concept of	
	(A) momentum	(B) work	
	(C) inertia	(D) energy	
027.	The law of conservation of line	ar momentum can be derived from	
	(A) Newton's first law	(B) Newton's second law	
	(C) Newton's third law	(D) None of these	
028.	The static frictional force between	n two objects at rest with respect to	
	one another is always		
	(A) less than maximum value	(B) smaller than maximum value	
	(C) equal to maximum value	(D) none of these	

029.	029. If the normal force is doubled, the coefficient of friction is		
	(A) not changed	(B) halved	
	(C) doubled	(D) triple	
030.	Displacement, velocity and acceler	ation of a particle are	
	(A) all vector quantities		
	(B) all vector quantities except dis	splacement	
	(C) all vector quantities except ve	locity	
	(D) all vector quantities except ac	celeration	
031.	The point of contra-flexure occurs	in	
	(A) cantilever beam only	(B) simply supported beam only	
	(C) overhanging beam only	(D) none of these	
032.	Which one of the following theory	y is suitable for brittle material?	
	(A) Maximum principal stress theory		
	(B) Distortion energy theory		
	(C) Maximum shear stress theory		
	(D) None of these		
033.		all compared to internal diameter	
	$[(d/t) \ge 20] \text{ is called } \underline{\hspace{1cm}}.$		
	(A) thin shell	(B) thick shell	
	(C) either thin or thick	(D) none of these	
034.	When mild steel is subjected to ten	sile loading, its fracture will conform	
	to		
	(A) granular	(B) cup & cone	
	(C) star	(D) none of these	
035.	The intensity of shear stress in a s	haft subjected to torsion is maximum	
	at		
	(A) its axis		
	(B) its outer layer		
	(C) a layer at a distance half of	radius of shaft from its center	
	(D) none of these		

036.	governor is dead weight governor.	
	(A) Watt	(B) Porter
	(C) Hartnell	(D) None of these
037.	A point on a link connecting double path.	e slider crank chain traces a
	(A) straight	(B) elliptical or circular
	(C) parabolic	(D) hyperbolic
038.	mechanism produces motion.	mathematically an exact straight line
	(A) Scotch yoke Mechanism	(B) Elliptical Trammel
	(C) Peaucellier's	(D) None of these
039.	For a vibrating system, if the dam is damped	nping factor is unity, then the system
	(A) under	(B) over
	(C) critically	(D) none of these
040.	The size of cam depends on	circle
	(A) prime	(B) base
	(C) outer	(D) pitch
041.	In a reciprocating engine mechanism centers are	, the number of links and instantaneous
	(A) 3, 3	(B) 3, 6
	(C) 4, 4	(D) 4, 6
042.	A quaternary joint, in a kinematic	chain, is equivalent to
	(A) one binary joint	(B) two binary joint
	(C) three binary joint	(D) none of these
043.	A kinematic chain is known as a r is fixed.	mechanism when of the links
	(A) one	(B) two
	(C) three	(D) none of these

044.	with pin joints.	an be transmitted with links
	(A) two	(B) four
	(C) one	(D) three
045.	SI unit of mass moment of inertia	ı is
	(A) Kg-m	(B) m ⁴
	(C) Kg-m ²	(D) Nm/kg
046.	A rack is a gear of	
	(A) infinite teeth	(B) infinite diameter
	(C) infinite pitch	(D) none of these
047.	Which of the following gears shareduction of 50: 1?	aould be recommended for a speed
	(A) Spur	(B) Helical
	(C) Worm and worm wheel	(D) Bevel
048.	type of gear profile is fr	ee from interference.
	(A) Cycloidal	(B) Involute
	(C) Both involute & cycloidal	(D) None of these
049.	While designing shaft and hub a weakest component.	ssembly is taken as the
	(A) key	(B) shaft
	(C) hub	(D) none of these
050.	A screw is specified by its	diameter.
	(A) minor	(B) pitch
	(C) major	(D) none of these
051.	The central gear of an epicyclic g	ear train is called a
	(A) Internal gear	(B) Ring gear
	(C) Planet gear	(D) Sun gear

(A) electroplating (C) coating (D) shot peening (C) coating (D) shot peening (C) coating (D) shot peening (D) shot peening (A) ductile materials (B) brittle materials (C) equally serious in both cases (D) depends on other factors (D) depends on other factors (E) 20° (D) 45° (E) 30° (D) 45° (E) 30° (D) 45° (E) 30° (E) 30° (E) 30° (E) 45° (E) 45°	(C) coating (D) shot peening 053. Stress concentration in static loading is more serious in (A) ductile materials (B) brittle materials (C) equally serious in both cases (D) depends on other factors 054. The notch angle of the Izod impact test specimen is (A) 10° (B) 20° (C) 30° (D) 45° 055. In testing a material for endurance strength, it is subjected to (A) static load (B) torsion load (C) impact load (D) completely reversed load 056. Resistance to fatigue of a material is measured by (A) Young's modulus (B) elastic limit (C) ultimate tensile strength (D) endurance limit 057. Spring index is (A) ratio of coil diameter to wire diameter (B) load required to produce unit deflection (C) its capability of storing energy (D) indication of quality of spring 058. When two springs are in series (having stiffness K), the equivalent stiffness will be (A) K (B) K/2 (D) none of these 059. In hydrostatic bearings (A) the Oil film pressure is generated only by the rotation of the journal	052.	The fatigue life of a part can be	more improved by
 O53. Stress concentration in static loading is more serious in (A) ductile materials (C) equally serious in both cases (D) depends on other factors O54. The notch angle of the Izod impact test specimen is (A) 10° (B) 20° (C) 30° (D) 45° O55. In testing a material for endurance strength, it is subjected to (A) static load (B) torsion load (C) impact load (D) completely reversed load O56. Resistance to fatigue of a material is measured by (A) Young's modulus (B) elastic limit (C) ultimate tensile strength (D) endurance limit O57. Spring index is (A) ratio of coil diameter to wire diameter (B) load required to produce unit deflection (C) its capability of storing energy (D) indication of quality of spring O58. When two springs are in series (having stiffness K), the equivalent stiffness will be (A) K (B) K/2 (C) 2K (D) none of these O59. In hydrostatic bearings (A) the Oil film pressure is generated only by the rotation of the journal 	 O53. Stress concentration in static loading is more serious in (A) ductile materials (C) equally serious in both cases (D) depends on other factors O54. The notch angle of the Izod impact test specimen is (A) 10° (B) 20° (C) 30° (D) 45° O55. In testing a material for endurance strength, it is subjected to (A) static load (B) torsion load (C) impact load (D) completely reversed load O56. Resistance to fatigue of a material is measured by (A) Young's modulus (B) elastic limit (C) ultimate tensile strength (D) endurance limit O57. Spring index is (A) ratio of coil diameter to wire diameter (B) load required to produce unit deflection (C) its capability of storing energy (D) indication of quality of spring O58. When two springs are in series (having stiffness K), the equivalent stiffness will be (A) K (B) K/2 (C) 2K (D) none of these O59. In hydrostatic bearings (A) the Oil film pressure is generated only by the rotation of the journal (B) the oil film is maintained by supplying oil under pressure (C) thin oil film causes metal to metal contact throughout 		(A) electroplating	(B) polishing
(A) ductile materials (C) equally serious in both cases (D) depends on other factors 054. The notch angle of the Izod impact test specimen is (A) 10° (B) 20° (C) 30° (D) 45° 055. In testing a material for endurance strength, it is subjected to (A) static load (B) torsion load (C) impact load (D) completely reversed load 056. Resistance to fatigue of a material is measured by (A) Young's modulus (B) elastic limit (C) ultimate tensile strength (D) endurance limit 057. Spring index is (A) ratio of coil diameter to wire diameter (B) load required to produce unit deflection (C) its capability of storing energy (D) indication of quality of spring 058. When two springs are in series (having stiffness K), the equivalent stiffness will be (A) K (B) K/2 (C) 2K (D) none of these	(A) ductile materials (C) equally serious in both cases (D) depends on other factors 054. The notch angle of the Izod impact test specimen is (A) 10° (B) 20° (C) 30° (D) 45° 055. In testing a material for endurance strength, it is subjected to (A) static load (B) torsion load (C) impact load (D) completely reversed load 056. Resistance to fatigue of a material is measured by (A) Young's modulus (B) elastic limit (C) ultimate tensile strength (D) endurance limit 057. Spring index is (A) ratio of coil diameter to wire diameter (B) load required to produce unit deflection (C) its capability of storing energy (D) indication of quality of spring 058. When two springs are in series (having stiffness K), the equivalen stiffness will be (A) K (C) 2K (D) none of these 059. In hydrostatic bearings (A) the Oil film pressure is generated only by the rotation of the journa (B) the oil film is maintained by supplying oil under pressure (C) thin oil film causes metal to metal contact throughout		(C) coating	(D) shot peening
(C) equally serious in both cases (D) depends on other factors 054. The notch angle of the Izod impact test specimen is (A) 10° (B) 20° (C) 30° (D) 45° 055. In testing a material for endurance strength, it is subjected to (A) static load (B) torsion load (C) impact load (D) completely reversed load 056. Resistance to fatigue of a material is measured by (A) Young's modulus (B) elastic limit (C) ultimate tensile strength (D) endurance limit 057. Spring index is (A) ratio of coil diameter to wire diameter (B) load required to produce unit deflection (C) its capability of storing energy (D) indication of quality of spring 058. When two springs are in series (having stiffness K), the equivalent stiffness will be (A) K (B) K/2 (C) 2K (D) none of these	(C) equally serious in both cases (D) depends on other factors 1054. The notch angle of the Izod impact test specimen is (A) 10° (C) 30° (D) 45° 1055. In testing a material for endurance strength, it is subjected to (A) static load (B) torsion load (C) impact load (D) completely reversed load 1056. Resistance to fatigue of a material is measured by (A) Young's modulus (B) elastic limit (C) ultimate tensile strength (D) endurance limit 1057. Spring index is (A) ratio of coil diameter to wire diameter (B) load required to produce unit deflection (C) its capability of storing energy (D) indication of quality of spring 1058. When two springs are in series (having stiffness K), the equivalent stiffness will be (A) K (B) K/2 (C) 2K (D) none of these 1059. In hydrostatic bearings (A) the Oil film pressure is generated only by the rotation of the journal (B) the oil film is maintained by supplying oil under pressure (C) thin oil film causes metal to metal contact throughout	053.	Stress concentration in static loadi	ng is more serious in
 054. The notch angle of the Izod impact test specimen is (A) 10° (B) 20° (C) 30° (D) 45° 055. In testing a material for endurance strength, it is subjected to (A) static load (B) torsion load (C) impact load (D) completely reversed load 056. Resistance to fatigue of a material is measured by (A) Young's modulus (B) elastic limit (C) ultimate tensile strength (D) endurance limit 057. Spring index is (A) ratio of coil diameter to wire diameter (B) load required to produce unit deflection (C) its capability of storing energy (D) indication of quality of spring 058. When two springs are in series (having stiffness K), the equivalent stiffness will be (A) K (B) K/2 (C) 2K (D) none of these 059. In hydrostatic bearings (A) the Oil film pressure is generated only by the rotation of the journal 	 054. The notch angle of the Izod impact test specimen is (A) 10° (C) 30° (D) 45° 055. In testing a material for endurance strength, it is subjected to (A) static load (B) torsion load (C) impact load (D) completely reversed load 056. Resistance to fatigue of a material is measured by (A) Young's modulus (B) elastic limit (C) ultimate tensile strength (D) endurance limit 057. Spring index is (A) ratio of coil diameter to wire diameter (B) load required to produce unit deflection (C) its capability of storing energy (D) indication of quality of spring 058. When two springs are in series (having stiffness K), the equivalent stiffness will be (A) K (B) K/2 (C) 2K (D) none of these 059. In hydrostatic bearings (A) the Oil film pressure is generated only by the rotation of the journal (B) the oil film is maintained by supplying oil under pressure (C) thin oil film causes metal to metal contact throughout 		(A) ductile materials	(B) brittle materials
(A) 10° (B) 20° (C) 30° (D) 45° 1. In testing a material for endurance strength, it is subjected to (A) static load (B) torsion load (C) impact load (D) completely reversed load 1. Resistance to fatigue of a material is measured by (A) Young's modulus (B) elastic limit (C) ultimate tensile strength (D) endurance limit 1. Spring index is (A) ratio of coil diameter to wire diameter (B) load required to produce unit deflection (C) its capability of storing energy (D) indication of quality of spring 1. When two springs are in series (having stiffness K), the equivalent stiffness will be (A) K (B) K/2 (C) 2K (D) none of these 1. OS9. In hydrostatic bearings (A) the Oil film pressure is generated only by the rotation of the journal	(A) 10° (B) 20° (C) 30° (D) 45° 1055. In testing a material for endurance strength, it is subjected to (A) static load (B) torsion load (C) impact load (D) completely reversed load 1056. Resistance to fatigue of a material is measured by (A) Young's modulus (B) elastic limit (C) ultimate tensile strength (D) endurance limit 1057. Spring index is (A) ratio of coil diameter to wire diameter (B) load required to produce unit deflection (C) its capability of storing energy (D) indication of quality of spring 1058. When two springs are in series (having stiffness K), the equivalent stiffness will be (A) K (B) K/2 (C) 2K (D) none of these 1059. In hydrostatic bearings (A) the Oil film pressure is generated only by the rotation of the journal (B) the oil film is maintained by supplying oil under pressure (C) thin oil film causes metal to metal contact throughout		(C) equally serious in both cases	(D) depends on other factors
(C) 30° (D) 45° 1055. In testing a material for endurance strength, it is subjected to (A) static load (B) torsion load (C) impact load (D) completely reversed load 1056. Resistance to fatigue of a material is measured by (A) Young's modulus (B) elastic limit (C) ultimate tensile strength (D) endurance limit 1057. Spring index is (A) ratio of coil diameter to wire diameter (B) load required to produce unit deflection (C) its capability of storing energy (D) indication of quality of spring 1058. When two springs are in series (having stiffness K), the equivalent stiffness will be (A) K (B) K/2 (C) 2K (D) none of these 1059. In hydrostatic bearings (A) the Oil film pressure is generated only by the rotation of the journal	(C) 30° (D) 45° 1055. In testing a material for endurance strength, it is subjected to (A) static load (B) torsion load (C) impact load (D) completely reversed load 1056. Resistance to fatigue of a material is measured by (A) Young's modulus (B) elastic limit (C) ultimate tensile strength (D) endurance limit 1057. Spring index is (A) ratio of coil diameter to wire diameter (B) load required to produce unit deflection (C) its capability of storing energy (D) indication of quality of spring 1058. When two springs are in series (having stiffness K), the equivalent stiffness will be (A) K (B) K/2 (C) 2K (D) none of these 1059. In hydrostatic bearings (A) the Oil film pressure is generated only by the rotation of the journal (B) the oil film is maintained by supplying oil under pressure (C) thin oil film causes metal to metal contact throughout	054.	The notch angle of the Izod impa	ct test specimen is
 055. In testing a material for endurance strength, it is subjected to (A) static load (B) torsion load (C) impact load (D) completely reversed load 056. Resistance to fatigue of a material is measured by (A) Young's modulus (B) elastic limit (C) ultimate tensile strength (D) endurance limit 057. Spring index is (A) ratio of coil diameter to wire diameter (B) load required to produce unit deflection (C) its capability of storing energy (D) indication of quality of spring 058. When two springs are in series (having stiffness K), the equivalent stiffness will be (A) K (B) K/2 (C) 2K (D) none of these 059. In hydrostatic bearings (A) the Oil film pressure is generated only by the rotation of the journal 	 055. In testing a material for endurance strength, it is subjected to (A) static load (B) torsion load (C) impact load (D) completely reversed load 056. Resistance to fatigue of a material is measured by (A) Young's modulus (B) elastic limit (C) ultimate tensile strength (D) endurance limit 057. Spring index is (A) ratio of coil diameter to wire diameter (B) load required to produce unit deflection (C) its capability of storing energy (D) indication of quality of spring 058. When two springs are in series (having stiffness K), the equivalent stiffness will be (A) K (B) K/2 (C) 2K (D) none of these 059. In hydrostatic bearings (A) the Oil film pressure is generated only by the rotation of the journal (B) the oil film is maintained by supplying oil under pressure (C) thin oil film causes metal to metal contact throughout 		(A) 10°	(B) 20°
(A) static load (C) impact load (D) completely reversed load 056. Resistance to fatigue of a material is measured by (A) Young's modulus (B) elastic limit (C) ultimate tensile strength (D) endurance limit 057. Spring index is (A) ratio of coil diameter to wire diameter (B) load required to produce unit deflection (C) its capability of storing energy (D) indication of quality of spring 058. When two springs are in series (having stiffness K), the equivalent stiffness will be (A) K (B) K/2 (C) 2K (D) none of these 059. In hydrostatic bearings (A) the Oil film pressure is generated only by the rotation of the journal	(A) static load (C) impact load (D) completely reversed load (C) impact load (D) completely reversed load (D) completely reversed load (E) torsion load (D) completely reversed load (E) torsion load (D) completely reversed load (E) torsion load (D) completely reversed load (E) torsion load (D) completely reversed load (E) torsion load (D) completely reversed load (E) torsion load (D) completely reversed load (E) torsion load (D) completely reversed load (E) torsion load (D) completely reversed load (E) torsion load (D) completely reversed load (E) torsion load (D) completely reversed load (E) torsion load (D) completely reversed load (E) torsion load (D) completely reversed load (E) torsion load (D) completely reversed load (E) torsion load (D) completely reversed load (B) elastic limit (D) endurance limit (C) its capability of storing energy (D) indication of quality of spring (E) torsion load (B) the oil diameter to wire diameter (E) to endurance limit (D) endurance limit (E) endurance limit (D) endurance limit (E) endurance limit (E) endurance limit (D) endurance limit (E) endurance limit (D) endurance limit (E) endurance limit		(C) 30°	(D) 45°
(C) impact load (D) completely reversed load (E) Resistance to fatigue of a material is measured by (A) Young's modulus (B) elastic limit (C) ultimate tensile strength (D) endurance limit (E) Ultimate tensile strength (D) endurance limit (E) Spring index is (A) ratio of coil diameter to wire diameter (B) load required to produce unit deflection (C) its capability of storing energy (D) indication of quality of spring (E) When two springs are in series (having stiffness K), the equivalent stiffness will be (A) K (B) K/2 (C) 2K (D) none of these (E) Completely reversed load	(C) impact load (D) completely reversed load (E) impact load (D) completely reversed load (E) Resistance to fatigue of a material is measured by (A) Young's modulus (B) elastic limit (C) ultimate tensile strength (E) endurance limit (E) endurance limit (E) ratio of coil diameter to wire diameter (B) load required to produce unit deflection (C) its capability of storing energy (D) indication of quality of spring (E) indication of quality of spring (E) indication of quality of spring (E) When two springs are in series (having stiffness K), the equivalent stiffness will be (A) K (B) K/2 (C) 2K (D) none of these (E) In hydrostatic bearings (A) the Oil film pressure is generated only by the rotation of the journal (B) the oil film is maintained by supplying oil under pressure (C) thin oil film causes metal to metal contact throughout	055.	In testing a material for endurance	e strength, it is subjected to
 056. Resistance to fatigue of a material is measured by (A) Young's modulus (B) elastic limit (C) ultimate tensile strength (D) endurance limit 057. Spring index is (A) ratio of coil diameter to wire diameter (B) load required to produce unit deflection (C) its capability of storing energy (D) indication of quality of spring 058. When two springs are in series (having stiffness K), the equivalent stiffness will be (A) K (B) K/2 (C) 2K (D) none of these 059. In hydrostatic bearings (A) the Oil film pressure is generated only by the rotation of the journal 	 056. Resistance to fatigue of a material is measured by (A) Young's modulus (B) elastic limit (C) ultimate tensile strength (D) endurance limit 057. Spring index is (A) ratio of coil diameter to wire diameter (B) load required to produce unit deflection (C) its capability of storing energy (D) indication of quality of spring 058. When two springs are in series (having stiffness K), the equivalent stiffness will be (A) K (B) K/2 (C) 2K (D) none of these 059. In hydrostatic bearings (A) the Oil film pressure is generated only by the rotation of the journal (B) the oil film is maintained by supplying oil under pressure (C) thin oil film causes metal to metal contact throughout 		(A) static load	(B) torsion load
 (A) Young's modulus (B) elastic limit (C) ultimate tensile strength (D) endurance limit 057. Spring index is (A) ratio of coil diameter to wire diameter (B) load required to produce unit deflection (C) its capability of storing energy (D) indication of quality of spring 058. When two springs are in series (having stiffness K), the equivalent stiffness will be (A) K (B) K/2 (C) 2K (D) none of these 059. In hydrostatic bearings (A) the Oil film pressure is generated only by the rotation of the journal 	(A) Young's modulus (B) elastic limit (C) ultimate tensile strength (D) endurance limit (C) ultimate tensile strength (D) endurance limit (D) endurance limit (E) spring index is (A) ratio of coil diameter to wire diameter (B) load required to produce unit deflection (C) its capability of storing energy (D) indication of quality of spring (E) when two springs are in series (having stiffness K), the equivalent stiffness will be (A) K (B) K/2 (C) 2K (D) none of these (E) the oil film pressure is generated only by the rotation of the journal B the oil film is maintained by supplying oil under pressure (C) thin oil film causes metal to metal contact throughout		(C) impact load	(D) completely reversed load
(C) ultimate tensile strength (D) endurance limit (E) Spring index is (A) ratio of coil diameter to wire diameter (B) load required to produce unit deflection (C) its capability of storing energy (D) indication of quality of spring (E) In hydrostatic bearings (A) the Oil film pressure is generated only by the rotation of the journal	(C) ultimate tensile strength (D) endurance limit (C) ultimate tensile strength (D) endurance limit (D) endurance limit (D) endurance limit (E) strength (D) endurance limit (D) endurance limit (E) strength (E) load required to produce unit deflection (C) its capability of storing energy (D) indication of quality of spring (E) when two springs are in series (having stiffness K), the equivalent stiffness will be (A) K (B) K/2 (C) 2K (D) none of these (D) the oil film pressure is generated only by the rotation of the journal of the interval of the power of	056.	Resistance to fatigue of a material	is measured by
 O57. Spring index is (A) ratio of coil diameter to wire diameter (B) load required to produce unit deflection (C) its capability of storing energy (D) indication of quality of spring O58. When two springs are in series (having stiffness K), the equivalent stiffness will be (A) K (B) K/2 (C) 2K (D) none of these O59. In hydrostatic bearings (A) the Oil film pressure is generated only by the rotation of the journal 	 O57. Spring index is (A) ratio of coil diameter to wire diameter (B) load required to produce unit deflection (C) its capability of storing energy (D) indication of quality of spring O58. When two springs are in series (having stiffness K), the equivalent stiffness will be (A) K (B) K/2 (C) 2K (D) none of these O59. In hydrostatic bearings (A) the Oil film pressure is generated only by the rotation of the journal (B) the oil film is maintained by supplying oil under pressure (C) thin oil film causes metal to metal contact throughout 		(A) Young's modulus	(B) elastic limit
(A) ratio of coil diameter to wire diameter (B) load required to produce unit deflection (C) its capability of storing energy (D) indication of quality of spring (E) when two springs are in series (having stiffness K), the equivalent stiffness will be (A) K (B) K/2 (C) 2K (D) none of these (A) the Oil film pressure is generated only by the rotation of the journal	(A) ratio of coil diameter to wire diameter (B) load required to produce unit deflection (C) its capability of storing energy (D) indication of quality of spring (D) indication of quality of spring (E) When two springs are in series (having stiffness K), the equivalent stiffness will be (A) K (B) K/2 (C) 2K (D) none of these (A) the Oil film pressure is generated only by the rotation of the journal (B) the oil film is maintained by supplying oil under pressure (C) thin oil film causes metal to metal contact throughout		(C) ultimate tensile strength	(D) endurance limit
 (B) load required to produce unit deflection (C) its capability of storing energy (D) indication of quality of spring When two springs are in series (having stiffness K), the equivalent stiffness will be (A) K (B) K/2 (C) 2K (D) none of these (A) the Oil film pressure is generated only by the rotation of the journal 	(B) load required to produce unit deflection (C) its capability of storing energy (D) indication of quality of spring (D) indication of quality of spring (E) When two springs are in series (having stiffness K), the equivalent stiffness will be (A) K (B) K/2 (C) 2K (D) none of these (A) the Oil film pressure is generated only by the rotation of the journal (B) the oil film is maintained by supplying oil under pressure (C) thin oil film causes metal to metal contact throughout	057.	Spring index is	
 (C) its capability of storing energy (D) indication of quality of spring When two springs are in series (having stiffness K), the equivalent stiffness will be (A) K (B) K/2 (C) 2K (D) none of these (D) none of the journal 	 (C) its capability of storing energy (D) indication of quality of spring When two springs are in series (having stiffness K), the equivalent stiffness will be (A) K (B) K/2 (C) 2K (D) none of these (D) the oil film pressure is generated only by the rotation of the journation of the interest of the pressure (C) thin oil film causes metal to metal contact throughout 		(A) ratio of coil diameter to wire	diameter
 (D) indication of quality of spring 058. When two springs are in series (having stiffness K), the equivalent stiffness will be (A) K (B) K/2 (C) 2K (D) none of these 059. In hydrostatic bearings (A) the Oil film pressure is generated only by the rotation of the journal 	 (D) indication of quality of spring 058. When two springs are in series (having stiffness K), the equivalent stiffness will be (A) K (B) K/2 (C) 2K (D) none of these 059. In hydrostatic bearings (A) the Oil film pressure is generated only by the rotation of the journation of the interest of the pressure (C) thin oil film causes metal to metal contact throughout 		(B) load required to produce unit	deflection
 When two springs are in series (having stiffness K), the equivalent stiffness will be (A) K (B) K/2 (C) 2K (D) none of these O59. In hydrostatic bearings (A) the Oil film pressure is generated only by the rotation of the journal 	 When two springs are in series (having stiffness K), the equivalent stiffness will be (A) K (B) K/2 (C) 2K (D) none of these O59. In hydrostatic bearings (A) the Oil film pressure is generated only by the rotation of the journal (B) the oil film is maintained by supplying oil under pressure (C) thin oil film causes metal to metal contact throughout 		(C) its capability of storing energy	y
stiffness will be (A) K (B) K/2 (C) 2K (D) none of these 059. In hydrostatic bearings (A) the Oil film pressure is generated only by the rotation of the journal	stiffness will be (A) K (B) K/2 (C) 2K (D) none of these 059. In hydrostatic bearings (A) the Oil film pressure is generated only by the rotation of the journa (B) the oil film is maintained by supplying oil under pressure (C) thin oil film causes metal to metal contact throughout		(D) indication of quality of spring	
(A) K (B) K/2 (C) 2K (D) none of these 059. In hydrostatic bearings (A) the Oil film pressure is generated only by the rotation of the journal	(A) K (C) 2K (D) none of these 059. In hydrostatic bearings (A) the Oil film pressure is generated only by the rotation of the journa (B) the oil film is maintained by supplying oil under pressure (C) thin oil film causes metal to metal contact throughout	058.	When two springs are in series	(having stiffness K), the equivalent
(C) 2K (D) none of these 059. In hydrostatic bearings (A) the Oil film pressure is generated only by the rotation of the journal	(C) 2K (D) none of these 059. In hydrostatic bearings (A) the Oil film pressure is generated only by the rotation of the journa (B) the oil film is maintained by supplying oil under pressure (C) thin oil film causes metal to metal contact throughout		stiffness will be	
059. In hydrostatic bearings (A) the Oil film pressure is generated only by the rotation of the journal	 (A) the Oil film pressure is generated only by the rotation of the journa (B) the oil film is maintained by supplying oil under pressure (C) thin oil film causes metal to metal contact throughout 		(A) K	(B) K/2
(A) the Oil film pressure is generated only by the rotation of the journal	 (A) the Oil film pressure is generated only by the rotation of the journa (B) the oil film is maintained by supplying oil under pressure (C) thin oil film causes metal to metal contact throughout 		(C) 2K	(D) none of these
	(B) the oil film is maintained by supplying oil under pressure (C) thin oil film causes metal to metal contact throughout	059.	In hydrostatic bearings	
(B) the oil film is maintained by supplying oil under pressure	(C) thin oil film causes metal to metal contact throughout		(A) the Oil film pressure is generate	ted only by the rotation of the journal
			(B) the oil film is maintained by	supplying oil under pressure
(C) thin oil film causes metal to metal contact throughout	(D) none of these		(C) thin oil film causes metal to	metal contact throughout
(D) none of these			(D) none of these	

060. According to Kennedy's theorem, if three bodies have plane motions, their instantaneous centers lie on (A) a triangle (B) a point (C) a straight line (D) a curve 061. What is effectiveness of fin? (A) The ratio of the fin heat transfer rate to the heat transfer rate that would exist without the fin (B) The heat which would be transferred if entire fin area was at minimum temperature to the ratio of actual heat transferred from fin area (C) The ratio of actual heat transferred from fin area to the heat which would be transferred if entire fin area was at minimum temperature (D) None of these 062. The Biot number is given by (A) the ratio of the boundary layer thermal resistance to internal thermal resistance of a solid (B) the ratio of internal thermal resistance of a solid to the boundary layer thermal resistance (C) multiplying internal thermal resistance of a solid and the boundary layer thermal resistance (D) none of these 063. If there are no externally induced flow velocities, then the Nusselt number (Nu) does not depend upon (A) Prandtl number (Pr) (B) Reynolds number (Re) (C) Grashof number (Gr) (D) none of these Heat transfer deals with the rate of (A) work transfer (B) temperature transfer (C) energy transfer (D) none of these

- **065.** What is the condition for conduction mode of heat transfer between two bodies?
 - (A) the two bodies must be in physical contact
 - (B) there must be temperature gradient between the bodies
 - (C) both A and B
 - (D) none of these
- **066.** The fluid flow in which the fluid particles in one layer do not mix with the fluid particles in the other layer is called as
 - (A) laminar flow

(B) turbulent flow

(C) layer flow

- (D) none of these
- **067.** Viscosity of a fluid can be defined as
 - (A) change in density of the fluid per unit temperature
 - (B) flow resistance offered by the fluid
 - (C) flow velocity change
 - (D) none of these
- **068.** The radiation takes place
 - (A) through molecular communication
 - (B) through vacuum
 - (C) both A and B
 - (D) none of the these
- **069.** What is emissive power of a body?
 - (A) total radiation emitted by the body per unit volume per unit time
 - (B) total radiation emitted by the body per unit temperature per unit time
 - (C) total radiation emitted per unit area per unit time
 - (D) all of these
- **070.** Sensible heat is the heat required to
 - (A) change vapour into liquid
 - (B) change liquid into vapour
 - (C) increase the temperature of a liquid or vapour
 - (D) convert water into steam and superheat it

0/1.	(A) 0.74	(B) 0.68
	(C) 0.52	(D) None of these
	(C) 0.32	(b) None of these
072.	In which type of point defect, po	ositive and negative ions are missing
	from the crystal?	
	(A) Vacancy defect	(B) Interstitial defect
	(C) Schottky defect	(D) Substitutional defect
073.	Which among the following is the	e characteristics of polymers?
	(A) High tensile strength	(B) High wear resistance
	(C) Low density	(D) All of these
074.	Which among the following is a	
	(A) Magnetic particle test	
	(C) Dye penetrant	(D) All of these
075	What is mant by raciliance in at	rocc etroin auruo?
073.	What is meant by resilience in str	ress strain curve:
	(A) area in the plastic region	
	(B) area in the elastic region(C) area in elastic and plastic reg	ion
	(D) none of these	ion
	(b) none of these	
076.	Which among the following is k	nown as Schmid factor? φ is angle
		lane and the applied stress direction,
	and λ the angle between slip and	
	(A) $\cos 2 \phi \times \cos 2 \lambda$	(B) $\cos \phi \times \sin \lambda$
	(C) $\sin \phi \times \sin \lambda$	(D) $\cos \phi \times \cos \lambda$
077.	What is meant by malleability?	
	(A) Metals undergo plastic deform	nation under compressive stresses
	(B) Metals can be drawn into win	res
	(C) Resistance to scratch	
	(D) None of these	

078.	In which type of test the capillary	action principle is used?
	(A) Probe test	(B) Magnetic particle test
	(C) Dye penetrant test	(D) None of these
079.	What causes transformation of defo	ormed martensite into austenite phase?
	(A) Heating	(B) Cooling
	(C) both A and B	(D) all of these
080.	Which process is used to remove	internal stresses from a metal?
	(A) Annealing	(B) Cold working
	(C) Both A and B	(D) None of these
081.	What does primary creep in creep	curve indicate?
	(A) Material is experiencing an in	crease in creep resistance
	(B) Material is experiencing a dec	crease in creep resistance
	(C) It represents high strain rate	
	(D) It represents creep at constant	rate
082.	As percentage of carbon increases	in steel its decreases.
	(A) Corrosion resistance	(B) Ultimate strength
	(C) Hardness	(D) Ductility
083.	Austenite is a solid solution of ca	rbon in iron.
	(A) Alpha	(B) Gamma
	(C) Beta	(D) Delta
084.	Out of the following which is the	amorphous material?
	(A) Steel	(B) Brass
	(C) Glass	(D) Silver
085.	structure in metals can b	e studied by naked eye
	(A) Atomic	(B) Micro
	(C) Grain	(D) Macro

086.	High speed steel belongs to the c	atego	ory of	steel
	(A) Alloy	(B)	Stainless	
	(C) Low carbon	(D)	Medium carbon	
087.	is the hardest known m	ateri	al.	
	(A) Cemented carbide	(B)	Ceramics	
	(C) Diamond	(D)	Alloy steel	
088.		f stai	inless steel is due	e to the presence
	of			
	(A) Manganese	(B)	Chromium	
	(C) Cobalt	(D)	Silicon	
089.	Slip gauges are generally made of	f		
	(A) Alloy steel	(B)	Cast iron	
	(C) Bronze	(D)	None of these	
090.	material shows complete	ely d	lirection dependen	nt properties.
	(A) Orthotropic	(B)	Isotropic	
	(C) Anisotropic	(D)	None of these	
091.	is the upper half of the	molo	1.	
	(A) Cope	(B)	Drag	
	(C) Flask	(D)	None of these	
092.	A taper provided on the pattern fo	r its	easy and clean	withdrawal from
	the mold is known as		•	
	(A) draft allowance	(B)	machining allow	vance
	(C) distortion allowance	(D)	shrinkage allow	ance
093.	is a reservoir in the mo	old t	hat serves as a	source of liquid
	metal for the casting to compensat			_
	(A) Riser		Runner	
	(C) Sprue	(D)	None of these	

094.	The hot working of metals is car	ried out
	(A) below the recrystallization temperature	
	(B) above the recrystallization ten	nperature
	(C) at the recrystallization temper	ature
	(D) at any temperature	
095.	Cold working of metal increases	
	(A) Hardness	(B) Tensile strength
	(C) Yield strength	(D) All of these
096.	is a sheet-metal cutting	operation along a straight line between
	two cutting edges	
	(A) Shearing	(B) Blanking
	(C) Punching	(D) Piercing
097.	Smaller grain size in a grinding v	wheel tends to
	(A) degrade surface finish	
	(B) have no effect on surface fin	ish
	(C) improve surface finish	
	(D) None of these	
098.	Which one of the following abras	sive materials is most appropriate for
	grinding hardened tool steel?	
	(A) Aluminum oxide	(B) Cubic boron nitride
	(C) Glass	(D) Silicon carbide
099.	As the temperature of a polymer	increases, its density
	(A) increases	(B) decreases
	(C) remains constant	(D) none of these
100.	A lathe is used to perform which operations.	one of the following manufacturing
	(A) Broaching,	(B) Lapping
	(C) Milling	(D) Turning
	(5)	<u>~</u> /

101.	When ductile work materials are c	ut at high speeds and relatively small
	feeds and depths,	are formed.
	(A) long continuous chips	
	(B) discontinuous chip	
	(C) continuous chip with built-up	edge
	(D) none of these	
102.	According to the Merchant equa	tion, the shear plane angle can be
	(A) increasing the rake angle	
	(B) increasing the friction angle b	between the tool and the chip
	(C) decreasing the rake angle	
	(D) none of these	
103.	Which one of the following metal	s would usually have the lowest unit
	horsepower in a machining operat	ion?
	(A) Brass	(B) Cast iron
	(C) Steel	(D) Aluminum
104.	Which of the following manufacture	ing processes are classified as material
	removal processes?	
	(A) Drawing	(B) Grinding
	(C) Extrusion	(D) Forging
105.	Which of the following is example of generating the workpart geometry	
	in machining, as opposed to forming the geometry?	
	(A) Welding	(B) Casting
	(C) Profile milling	(D) Beading
106.	A tap is a cutting tool used to geometries?	create which one of the following
	(A) External threads	(B) Flat planar surfaces
	(C) Internal threads	(D) Square holes

	(A) Knee-and-column Machine	(B) Ram mill
	(C) Universal milling machine	(D) None of these
108.	(A) A single-point tool moves line	ves linearly past a stationary workpart st a rotating cutting tool
109.	(A) A rotating tool moves past a	ves linearly past a stationary workpart ting cutting tool
110.	Gear hobbing is a special form of, operations? (A) Grinding (C) Planning	which one of the following machining (B) Milling (D) Shaping
111.	Diamond pyramid indenter is used (A) Brinell Hardness Test (C) Rockwell B Hardness Test	(B) Vickers Hardness Test (D) None of these
112.	Which of the following processes (A) Diffusion Welding(C) Laser-beam welding	are classified as fusion welding? (B) Forge welding (D) Ultrasonic welding
113.	Which one of the following arc-welding processes uses a nonconsumable electrode? (A) FCAW (Flux-Cored Arc Welding) (B) GMAW (Gas Metal Arc Welding) (C) GTAW (Gas Tungsten Arc Welding) (D) SMAW (Shielded Metal Arc Welding)	

The basic milling machine is which one of the following?

107.

114.	Which of the following metals are	e used in solder alloys?
	(A) Aluminum	(B) Gold
	(C) Iron	(D) Silver
115.	Chemical milling is used in which (A) Drilling holes with high depth (B) Making intricate patterns in the (C) Removing metal from aircraft (D) Cutting of plastic sheets	in sheet metal
116.	Of the following processes, which removal rates? (A) Electric discharge machining (C) Plasma arc cutting	one is noted for the highest material (B) Laser beam machining (D) Water jet cutting
117.	The three components of an auton (A) actuators, sensors, control syst (B) sensors, feedback loop, communication (C) actuators, humans, communication (D) power, a program of instruction	em unication system tion system
118.	The input/output relationship of a (A) analog (C) sensitivity	sensor is called (B) converter (D) transfer function
119.	A stepper motor is which one of (A) Actuator (C) Pulse counter	the following types of devices? (B) Interface device (D) Sensor
120.	The standard coordinate system for based on (A) Cartesian coordinates plus three (B) cylindrical coordinates (C) polar coordinates (D) Both B & C	r numerical control machine tools is

- 121. The APT (Automatically Programmed Tooling) command GORGT is
 - (A) geometry statement involving a volume of revolution about a central axis
 - (B) name of the humanoid in the latest Star Wars movie
 - (C) point-to-point command
 - (D) tool path command in which the tool must go right in the next move
- **122.** Fixed routing is associated with which of the following types of manufacturing systems?
 - (A) Automated production lines
 - (B) Cellular manufacturing systems
 - (C) Flexible manufacturing systems
 - (D) All of these
- **123.** Inventory carrying costs include which of the following?
 - (A) Equipment downtime cost
- (B) Production cost

(C) Setup cost

- (D) Storage cost
- 124. The word kanban is most closely associated with
 - (A) capacity planning
- (B) economic order quantity
- (C) just-in-time production
- (D) material requirements planning
- 125. Machine loading refers most closely to
 - (A) assigning jobs to a work center
 - (B) floor foundation in the factory
 - (C) releasing orders to the shop
 - (D) sequencing jobs through a machine
- 126. In a control chart, the upper control limit is set equal to
 - (A) process mean
 - (B) process mean plus three standard deviations
 - (C) upper design tolerance limit
 - (D) upper value of the maximum range R

127.	 (A) number of rejects in the sample (B) number of reworked parts in a sample (C) radius of a cylindrical part 	
	(D) range of sample values	
128.	Break-even analysis consists of	
	(A) fixed cost	(B) variable cost
	(C) fixed and variable cost	(D) operation cost
129.	9. Queuing theory deals with problems of	
	(A) material handling	
	(B) reducing the waiting time or	idle time
	(C) better utilization of man servi-	ces
	(D) effective use of machines	
130.	Gantt charts are used for	
	(A) forecasting sales	(B) production schedule
	(C) scheduling and routing	(D) linear programming
131.	Simplex method is used for	
	(A) linear programming	(B) value analysis
	(C) concurrent engineering	(D) life cycle analysis
132.	Positive slack on a PERT indicate	s that project is
	(A) ahead of schedule	(B) beyond schedule
	(C) as per schedule	(D) on critical path
133.	First law of thermodynamics deals	with
	(A) conservation of hear	(B) conservation of momentum
	(C) conservation of mass	(D) conservation of energy
134.	Basic tool in work study is	
	(A) graph paper	(B) process chart
	(C) planning chart	(D) stop watch

135.	what does symbol 'O' imply in work study	
	(A) operation	(B) inspection
	(C) transport	(D) delay/temporary storage
136.	What does symbol 'D' imply in w	ork study
	(A) inspection	(B) transport
	(C) delay/temporary storage	(D) permanent storage
137.	CPM is the	
137.		(P) event oriented technique
	(A) time oriented technique	(B) event oriented technique
	(C) activity oriented technique	(D) target oriented technique
138.	PERT is the	
	(A) time oriented technique	(B) event oriented technique
	(C) activity oriented technique	(D) target oriented technique
	-	-
139.	Which of the following laws is ap	plicable for the behavior of a perfect
	gas?	
	(A) Boyle's law	(B) Charles'law
	(C) Gay-Lussac law	(D) all of these
140.	The unit of temperature in S.I. un	ita ia
140.	The unit of temperature in S.I. un (A) Centigrade	(B) Celsius
	(C) Fahrenheit	(D) Kelvin
	(C) Paintinent	(D) Kelvin
141.	An open system is one in which	
	•	es of the system, though energy may
	do so	
	(B) neither mass nor energy cross	es the boundaries of the system
	(C) both energy and mass cross the	ne boundaries of the system
	(D) mass crosses the boundary bu	t not the energy
142	Absolute programs is massured as	
142.	Absolute pressure is measured as	processo
	(A) Gauge pressure – Atmospheric	•
	(B) Gauge pressure + Atmospheric	•
	(C) Gauge pressure / Atmospheric	pressure
	(D) none of these	

143.	The process in which no heat train	nsfer takes place through boundaries
	is called as	
	(A) isothermal process	(B) adiabatic process
	(C) isochoric process	(D) none of these
144.	Heat transfer is	
	(A) a point function	(B) a path function
	(C) a transfer function	(D) none of these
145.	5. The amount of heat required to raise a unit mass of substance thro	
	a unit rise in temperature is called	l as
	(A) heat capacity of a substance	(B) specific heat of a substance
	(C) latent heat of a substance	(D) none of these
146.	Perpetual motion machine of first	kind (PMM1) is the machine which
	violates	
	(A) Kelvin-Planck statement	(B) Clausius statement
	(C) first law of thermodynamics	(D) none of these
147.	147. Energy is not conserved but destroyed in the process. What is the reabelind this?(A) reversibility(B) irreversibility	
	(C) both reversibility and irreversi	bility
	(D) none of these	
148.	The dryness (x) fraction of superh	eated steam is taken as
	(A) x = 0	(B) $x = 0.9$
	(C) $x = 0.5$	(D) x = 1
149.	At 100% relative humidity, the wet bulb temperature is	
	(A) lower than the dew point temperature	
	(B) higher than the dew point ten	nperature
	(C) equal to the dew point temper	rature
	(D) none of these	

150.	Assume that a reversible heat engine is operating between a source at T_1 and a sink at T_2 . If T_2 decreases, the efficiency of the heat engine
	(A) decreases (B) increases
	(C) remains constant (D) none of these
151.	What should be the critical temperature of working fluid for maximum efficiency of vapour power cycle? (A) the working fluid should have critical temperature as low as possible (B) the working fluid should have critical temperature as high as possible (C) the critical temperature does not affect the efficiency of the vapour power cycle (D) none of these
152.	In working condition of turbojet engine, velocity of air entering the engine is (A) higher than the velocity of exhaust gases leaving the engine (B) lower than the velocity of exhaust gases leaving the engine (C) equal to the velocity of exhaust gases leaving the engine (D) cannot say
153.	The flow of steam is supersonic of the nozzle. (A) at the throat (B) at the entrance (C) in the divergent portion (D) in the convergent portion
154.	Which device used to separate condensate from the steam without letting steam escape? (A) condenser (B) steam valve (C) steam trap (D) none of these
155.	Gas turbines are suitable for aircraft propulsion because (A) gas turbines are light weight (B) gas turbines are compact in size (C) gas turbines have a high power-to-weight ratio (D) all of these

156.	6. On psychrometric chart, wet bulb temperature lines are(A) horizontal with uniformly spaced	
	(B) horizontal with non-uniformly	spaced
	(C) inclined with uniformly space	d
	(D) inclined with non-uniformly s	paced
157.	Which among the following is the	basic air standard cycle for all modern
	gas turbine plants?	
	(A) Brayton cycle	(B) Rankine cycle
	(C) Otto cycle	(D) Diesel cycle
158.	8. What is the disadvantage of ammonia using as a refrigerant?	
	(A) ammonia cannot be detected in	in case of leakage
	(B) ammonia has a bad effect on	ozone layer
	(C) ammonia is toxic in nature	
	(D) ammonia has higher energy c	ost
159.	The mechanical work required to run vapour absorption system	
	(A) is more than the mechanical wo system	ork required to run vapour compression
	(B) is less than the mechanical work required to run vapour compression system(C) is similar to the mechanical work required to run vapour compression	
	system	
	(D) cannot say	
160.	The formation of fog starts when,	
	(A) air temperature is equal to the	e dew point temperature
	(B) air temperature is greater than	n the dew point temperature
	(C) both a. and b.	
	(D) none of these	
161.	Work done in a constant volume	process is
	(A) negative	(B) zero
	(C) positive	(D) none of these

- **162.** What is the effect of superheated steam on efficiency of Rankine cycle?
 - (A) efficiency of Rankine cycle decreases with increase in superheat of the steam
 - (B) efficiency of Rankine cycle increases with increase in superheat of the steam
 - (C) efficiency of Rankine cycle is not affected by change in superheat of the steam
 - (D) none of these
- **163.** Which processes do occur in the Brayton cycle?
 - (A) two reversible adiabatic processes and two reversible isochoric processes
 - (B) two reversible adiabatic processes and two reversible isobaric processes
 - (C) two reversible adiabatic processes and two reversible isothermal processes
 - (D) two reversible adiabatic processes and two reversible isentropic processes
- **164.** When two refrigerating cycles are used in series with two different refrigerants, the system is known as
 - (A) dual refrigeration system
 - (B) cascade refrigeration system
 - (C) vapour absorption refrigeration system
 - (D) none of these
- 165. How is the natural draught produced for exhaust gases?
 - (A) by using fan

(B) by using chimney

(C) by using gravity

(D) none of these

- **166.** The temperature of air recorded by thermometer when the bulb is covered by a cotton wick saturated by water is called as
 - (A) dry bulb temperature

(B) wet bulb temperature

(C) stream temperature

(D) psychrometric temperature

167.	. What is the purpose of using economizer in the boiler?	
	(A) to heat feed water by utilizing	g heat from exhaust gases
	(B) to heat feed water by utilizing	g some heat from superheated steam
	(C) to superheat steam	- -
	(D) none of the above	
168.	168. Otto cycle is the air standard cycle of	
		(B) compression (CI) ignition engine
	(C) both SI and CI engines	
169.	The following is an internationally	recognized and accepted unit system
	(A) MKS	(B) FPS
	(C) SI	(D) All of the above
170.	The following is a line standard of	of measurement
	(A) Measuring tape	(B) Slip gauge
	(C) Micrometer	(D) End bars
171.	To check external diameter of cyli	indrical, we use
	(A) Plug gauge	(B) Ring gauge
	(C) Slip gauge	(D) Standard screw pitch gauge
	() a r eme	()
172. A substance which produces a lot of heat on burning is cal		of heat on burning is called
	(A) oxidising agent	(B) biogas
	(C) biomass	(D) fuel
173.	Fuel formed under the earth's surf	ace by the decomposition of organic
	matter is called	
	(A) organic fuel	(B) biogas
	(C) fossil fuel	(D) underground fuel
154	William of the City	1 1 10
174.	Which of the following causes the	
	(A) Petrol	(B) Diesel
	(C) Coal	(D) Natural gas

175.	The radiation in the sunlight that	gives us the feeling of hotness is
	(A) visible radiation	(B) infra-red
	(C) ultra-violet	(D) none of these
176.	India first underground nuclear tes	
	(A) Kota	(B) Ranchi
	(C) Jaipur	(D) Pokhran
177.	In a diesel engine, the fuel is ign	ited by
	(A) spark	
	(B) injected fuel	
	(C) heat resulting from compressing	g air that is supplied for combustion
	(D) ignition	
178.	Scavenging air in diesel engine m	eans
	(A) air used for combustion sent under pressure	
	(B) burnt air containing products of combustion	
	(C) air used for forcing burnt gases out of engine's cylinder during the	
exhaust period		
	(D) air fuel mixture	
150		
179.	Supercharging is the process of	e earle a la earle a la earle
		gine with air at a density greater than
	the density of the surrounding	atmosphere
	(B) providing forced cooling air	1 1
	(C) injecting excess fuel for raisir	
	(D) supplying compressed air to r	emove combustion products fully
180.	Compression ratio of IC. engines	is
	(A) the ratio of volumes of air in	n cylinder before compression stroke
	and after compression stroke	
	(B) volume displaced by piston	per stroke and clearance volume in
	cylinder	
	(C) ratio of pressure after compre	ssion and before compression
	(D) swept volume/cylinder volume	

181.	The air standard efficiency of an for the given compression ratio is (A) same (B) less (C) more (D) more or less depending on po	Otto cycle compared to diesel cycle wer rating
182.	The ignition quality of petrol is ex	xpressed by
	(A) Cetane number	(B) Octane number
	(C) Calorific value	(D) All of these
183.	A stoichiometric air-fuel ratio is	
	(A) chemically correct mixture	(B) lean mixture
	(C) rich mixture for idling	(D) rich mixture for over loads
184.	Which of the following is the lightest and most volatile liquid fuel?	
	(A) diesel	(B) kerosene
	(C) fuel oil	(D) gasoline
185.	Pour point of fuel oil is the	
	(A) minimum temperature to which oil is heated in order to give off inflammable vapours in sufficient quantity to ignite momentarily when brought in contact with a flame	
	(B) temperature at which it solidif	ies
	(C) it catches fire without external aid	
	(D) indicated by 90% distillation to oil has distilled off	emperature i.e., when 90% of sample
	on has distinct on	
186.	Which of the following is a steam	turbine?
	(A) De laval	(B) Kaplan
	(C) Francis	(D) Pelton
187.	Which of the following medium cylinder?	is compressed in a diesel engine
	(A) air alone	(B) air and fuel
	(C) air and lub oil	(D) fuel alone

188.	The air-fuel ratio of the petrol engine is controlled by		
	(A) fuel pump	(B) governor	
	(C) injector	(D) carburetor	
189.	In diesel engine, the compression r	ratio in comparison to expansion ratio	
	(A) same	(B) less	
	(C) more	(D) variable	
190.	The power actually developed insi	de the engine cylinder is called as	
	(A) Indicated power	(B) Brake power	
	(C) Frictional power	(D) None of these	
191.	The sequence order of events in a	a four stroke engine is	
	(A) Suction-exhaust-power-compression		
	(B) Suction-power-compression-exhaust		
	(C) Suction-compression-power-exh	naust	
	(D) Exhaust-compression-power-suc	etion	
192.	The main cause for the change in	engine oil viscosity is	
	(A) Humidity	(B) Temperature	
	(C) Vibration	(D) Contamination	
193.	If the spark plug deposit indicate	s black coating of soot, it indicates	
	that the engine has been generally	operating on	
	(A) Too lean mixture	(B) Stoichiometric mixture	
	(C) Most economical mixture	(D) Too rich mixture	
194.	The connecting rod connects the p	piston and the	
	(A) Cylinder head	(B) Cylinder block	
	(C) Camshaft	(D) Crankshaft	
195.	The device for smoothening out	the power impulses from the engine	
	is called		
	(A) Clutch	(B) Differential	
	(C) Flywheel	(D) Torque converter	

	(A) bolt and nut	(B) lead screw of a lathe	
	(C) ball and socket joint	(D) ball bearing and roller bearing	
197.	Idlar pullay is used in open halt	driva arrangamant	
197.	Idler pulley is used in open belt drive arrangement (A) for changing the direction of motion of the belt		
	(B) for applying tension		
	C) for increasing -velocity ratio		
	(D) all of the above		
198.	In which type of vibrations, the am	n which type of vibrations, the amplitude of vibration goes on decreasing very cycle?	
170.	**		
	(A) Damped vibrations	(B) Undamped vibrations	
	(C) Both a. and b.	(D) None of the above	
	(C) Both a. and b.	(D) None of the above	
199.	The rotating shafts tend to vibrate violently at whirling speeds because		
	(A) the shafts are rotating at very) the shafts are rotating at very slow speeds	
	 (B) bearing centre line coincides with the axis (C) resonance is caused due to the heavy mass of the rotor (D) the shafts are balance and rotating at very high speeds 		
200.	The unbalanced primary forces in a reciprocating engine are		
	(A) balanced completely	(B) balanced partially	
	(C) balanced by secondary forces	(D) not balanced	

196. The example of rolling pair is
